### **DETAILED ACTION**

Claims 1-55 are pending.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-37 drawn to a general process of making a compound of formula Ar-R, classified in classes 540, 544, 546, 548, 560, 562, 564, subclasses various depending upon the choice of Ar and R.
- II. Claims 38-55, drawn to compound of formula I, process of making, composition, the method of use classified in class 544, subclass 283, class 514 subclass 266.1.

If Group I is elected applicants should elect a specific Ar other than that is provided for in Group II for examination.

The inventions are distinct, each from the other because of the following reasons:

As per MPEP § 803, there are two criteria for a proper requirement for restriction between patentably distinct inventions:

- (A) The inventions must be independent or distinct as claimed and
- (B) There must be a serious burden on the examiner if restriction is required.

Invention I and II are independent and distinct from each other because they are directed to structurally dissimilar compounds that lack common core, namely, Ar-R which can include any aryl or heteroaryl cores versus quinazoline core. Consequently, the groups have different classifications and require separate prior art searches. They can be made and used independently. Art which may render obvious or anticipate one

Art Unit: 1624

of the groups would not necessarily do the same for the other group. For example prior art cited in the International Search Report may not be applicable to all the above groups. Each can support a patent as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

Furthermore, Group I relates a general process of making Ar-R while Group II besides the process of making compound of formula I, the compound, composition and method of use which is distinct and independent from Group I. A prior art which anticipate or renders the process of Group I may not do so for the process of Group II if the compound of formula I is found patentable. Hence, each of these groups are distinct and independent.

In addition, it is necessary to classify and search all the controlling cores generically embraced in Group I and such a search of all controlling cores would serious search burden given the limited time available for each application.

In view of distinct nature of each of the invention, the restriction is set forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Should applicant traverse on the ground that the species Ar-R and formula I are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
